Strategy Description

The investment objective of the Mercator International Opportunity Portfolio is to generate long term capital gains by investing in a geographically diverse portfolio of foreign equities. Holdings are predominantly listed in the developed countries included in the Morgan Stanley EAFE Index.

Opportunistic and contrarian investing employing thematic and bottom-up research. Management believes that over the long term, stock prices follow business performance, so short term market fluctuations should be discounted. Broad themes—such as for example "the internet of things" or changing demographics—inform research focus and portfolio construction. The strategy is geographically diversified and looks for long term gains. It will thus let its winners run and sell its losers.
